SUMMARY

B.Tech AI & ML student (CGPA 8.54/10) targeting Software Development Engineer roles. Solved **600+ LeetCode problems**; developed full-stack applications with Node.js, Express.js, MongoDB, REST APIs, JWT authentication, and LLM integrations.

EDUCATION

Birla Institute of Technology (BIT), Mesra | Aug 2024 – May 2028
B.Tech, Artificial Intelligence and Machine Learning | CGPA: 8.54/10
Coursework: Data Structures & Algorithms, Object-Oriented Programming, Machine Learning, Linear Algebra

TECHNICAL SKILLS

- **Languages:** C++, Python, JavaScript, C, SQL, HTML5, CSS3
- **Core CS:** Data Structures & Algorithms, OOP, Problem Solving
- **Backend & Databases:** Node.js, Express.js, REST APIs, JWT, Rate Limiting, MongoDB, MySQL
- **AI/ML:** NumPy, Matplotlib, Supervised & Unsupervised Learning, CNNs, Recommender Systems, Reinforcement Learning, LLM APIs, Agentic AI
- **Tools:** Git, GitHub, VS Code, Postman

PROJECTS

MovieV3 – Full-Stack Movie Discovery Platform | github.com/kushwaha-aryan/movieV3
Node.js, Express.js, MongoDB, JWT, TMDB API, LLM API
- Extended the Express REST API from **9 to 15 endpoints (+67%)**; implemented JWT authentication and rate-limiting middleware for user-specific routes.
- Integrated TMDB movie data with search, genre filtering, multi-criteria sorting, infinite scroll, and lazy loading; organized watchlist, favorites, and watched-history features across **5 pages**.
- Connected an LLM API to generate personalized movie recommendations, complementing catalog-based discovery.

Business Entity Resolution – ML Matching Pipeline | github.com/kushwaha-aryan/business-entity-resolution
Python, Feature Engineering, Classification, Amazon ML Challenge 2026
- Created a configurable record-matching pipeline for noisy business data using candidate generation, feature engineering, and classification to link entities across datasets.
- Processed competition-scale files (~**1.27 GB training**, **1.14 GB test**) and added evaluation plus submission-validation utilities for repeatable experiments.

Edge AI Acoustic Supervisor – B.Tech Project | github.com/kushwaha-aryan/edge-ai-acoustic-supervisor
Python, YAMNet, 1024-D Audio Embeddings, Logistic Regression, TensorFlow
- Classifies **17 environmental trigger classes** using YAMNet's 1024-dimensional audio embeddings and a Logistic Regression classifier; validation accuracy is approximately **77%**.
- Compared experimental approaches including 17 binary CNN classifiers with a Logistic Regression head and a CNN-embedding MLP; selected YAMNet + Logistic Regression for final inference.
- Implemented a local prototype UI with four response modes: Maximum ANC, Transparency, Safety Transparency, and Low-Power Standby. Uses ESC-50 validation clips; live microphone input and earbud hardware control remain unimplemented.

AgenticAI – AI Stock Portfolio Analyzer | github.com/kushwaha-aryan/AgenticAI
Python, JavaScript, Groq LLM, Agentic AI, Financial Data Analysis
- Prototyped Groq-powered agentic LLM workflows that analyze stock-portfolio data and produce structured insights.
- Collaborated on a Python/JavaScript hackathon prototype in ~**5–6 hours**; ranked **5th of 8 teams**.

ACHIEVEMENTS

- Solved **600+ DSA problems** on LeetCode | leetcode.com/u/dartGoblin42
- All India Rank **24,418** in JEE Advanced 2024 (first attempt)

CERTIFICATIONS

- Machine Learning Specialization (3 courses), DeepLearning.AI (Dec 2025 – Aug 2026)
- Python, Kaggle (May 2025)
